

Solid Timber / High Gloss Finishes / Compact Laminate Special Conditions.

Solid Timber:

Please note solid timber is particularly prone to movement, cupping, bowing and shrinkage when exposed to hot and dry locations,

Storage and Transport - please store in a flat well supported manner, too hot or extremely dry conditions may cause bowing, cupping etc.

If you are supplying base it's important to adequately support the timber top, overhangs greater than 300mm are not recommended,

MDC warranty does not cover any of the above - if you are unsure, please ask and we will assist

High Gloss Finishes:

Please note that all high gloss finishes are more prone to marking, scratching and requires a very high level of care both in transit, installation and in use,

High Gloss Paint & Laminates often show minor undulations which are unavoidable,

MDC warranty does not cover any of the above - we highly recommend more modern matte finishes.

Compact Laminate - alfresco waterproof mounting substrates:

Please note that MDC recommend direct screw fixing into the Compact Laminate, assuming you can give us drilling patterns and technical details of the bases you are using we can pre drill and supply the correct screws,

If you prefer, we can offer PVC Lite, Prolight or similar however please note although we bond these using appropriate glue using screws that are too long can cause delamination,

Unfortunately, PVC light and the like are light weight low density boards and don't provide good screw fixing - it's very easy to overdrive the screws rendering the connection poor at best

MDC warranty does not cover any of the above - we highly recommend direct screw fixing - if you are unsure, please ask and we will assist

Thanks – MDC
